

- **Cataloguing**

LIBSYS is built around its own centralized bibliographic database based on MARC format supporting different types of materials, print and non-print. It makes available the various catalogues/indexes online for instant reference and thus enables searching on subjects and keywords. The powerful data entry facility also accepts data in standard machine readable formats such as USMARC, OCLC, etc. There by facilitating import and export of bibliographic information. The capabilities of LIBSYS cataloguing system include:

- Maintenance of an In-Process File
- Catalogue Production
- Catalogue Maintenance
- Resource Sharing
- Thesaurus Construction
- Holding Updates
- Holding Summary
- Catalogue Cards
- Current Awareness Services

**Book Invoices:**
